* Mean values on a scale from 1 (never) to 4 (frequently).

**"Replacement potential" indicates on a continuum from approx. -3 to approx. +3 how strongly task perceptions are characterised by detailed specifications on the one hand or necessities to try out new things on the other (for more information, see Lewalder et al. 2019, p. 7 ff.).

*** Additive, weighted indices formed from different characteristics. All index values range between 0 (no agreement) and 1 (high

agreement). All values weighted, own calculations.

Values for which there are significant differences between employees in essential job occupations on the respective lists and the others according to the Wilcoxon rank sum test are grey. For detailed individual results, please contact the team of authors.
